Pivot Cheat Sheet

Step 1: Develop Directional Bias based on the Central Pivot Range	Step 2: Confirm the Directional Bias*	Step 3: Determine magnitude of potential move	Step 4: Trade the pivots
Bullish Bias: Today's Central Pivot range is **higher** than yesterday's (note, overlapping CPR where 2[nd] day range is higher is also bullish, just not as bullish) Today's CPR Yesterday's CPR	Yesterday's close price is above Yesterday's Pivot range. Today's Open price is above today's pivot range. *Note, if the open happens to be BELOW the value range, be on lookout for trend reversal, especially if below CAM S3*	A tight central pivot range likely means a more explosive price move could be expected.	**Long Bias** (use VPA/patterns to confirm entry, though) BUY at S1 (Pivot boss pivot) or Central pivot range. Target R3 or R4 (Pivot Boss pivot) when the central pivot range is tight. Target R1/R2 when Central Pivot range is wider CAM PIVOTS: • BUY at S3, Target R3, if it opens between S3/R3 • BUY at R3/R4, target R4/R5 if it opens above R3
Bearish Bias: Today's Central Pivot range is **lower** than yesterday's (note, overlapping CPR where 2[nd] day range is lower is also bearish, just not as bearish) Yesterday's CPR Today's CPR	Yesterday's close price is below yesterday's Pivot range. Today's Open price is below today's pivot range *Note, if the open happens to be ABOVE the value range, be on lookout for trend reversal, especially if above CAM R3*	A wide central pivot range means price could be more range bound	**Short Bias** (use VPA/patterns to confirm entry, though) Sell at R1 (Pivot boss pivot) or Central pivot range. Target S3 or S4 (Pivot Boss pivot) when the central pivot range is tight. Target S1/S2 when Central Pivot range is wider CAM PIVOTS: • SELL at R3, Target S3, if it opens between R3/S3 • SELL at S3/S4, target S4/S5, if it opens below S3
Non-directional bias, but big move likely Today's Central pivot range is between yesterday's Central Pivot Range Yesterday's CPR Today's CPR	None, but wait for the open to be above CAM R4 or below S4 to determine a bias. Wait for a test of the level, and see how it reacts. If it holds, you could be in for a nice trend day.	Large move likely, as this is essentially telling you there has been consolidation and the range is getting tighter	**Open above R4 → Long bias:** Buy at R4 (after a test). Do not target R5, set trailing stop as the move will likely be large **Open below S4 → Short bias:** Sell at S4 (after a test). Do not target S5, set trailing stop as the move will likely be large

* If the confirmation does not happen on day 2 (Today's open is on the opposite side of pivot range), you could see a nice trend reversal play out that day, especially if the Open is beyond the 3[rd] or 4[th] CAM levels
